

SHIELDING PLASTIC & GLASS

VELOSTAT® by 3M

It's plain black, shiny and big. Velostat is a very low cost extra wide conductive plastic sheet for electric field shielding. Carbon impregnated black polyethylene film. Volume resistivity is <500 ohms/cm which makes this an excellent conductor for a plastic. Conductivity is not affected by humidity or aging. Ground cords can be attached with a simple

alligator clip. Use it to line walls, windows, or under your mattress. Great for wrapping lamp, telephone and computer cords too!

Velostat® Film 36" wide 4 mil (Cat. #D1234) \$1.95/lin ft
Full roll (150 ft) (Cat. #D1234-roll) \$215.00 Other sizes available as special order

CONDUCTIVE TUBING *Low Cost E-Field Shielding*

Composed of electrically conductive black polyethylene (similar to Velostat) and great for shielding electrical cords. It's easy to slide any electrical cord (even fits those giant dryer plugs!) through this 4" wide (when flat) sleeve without having to remove the plug from the end of the cord. Only 4 mil thick, it won't hold up to tearing, heat or abuse, but it will do a great job on the lamp cord by your bed, the air conditioner cord, or even cables in your car. Surface resistivity <1000 Ω/sq. **Conductive Tubing (Cat. #D1211) \$1.15 per lin ft**

Other sizes available as special order

BUDGET RF CURTAIN SHIELD

High Performance and Low Cost

This has to be the shielding bargain of the century. A light weight, highly reflective mirrored plastic curtain which is simple to install and provides well over 20 dB (100:1) reduction in common radiofrequency and microwave radiation! Hangs easily from small diameter curtain rods and can be used to shield windows, make room partitions, doorway openings, or even as a wall hanging. Also blocks UV and sunlight, so it prevents sunlight fading of your furniture, and helps prevent heat loss. Built in

sleeve for curtain rod at the top. One side is conductive, make sure to use a ground cord. 36 inch wide x 81 inch long, and you can trim it easily with scissors to fit. Could also be used to make a poncho. Nearly opaque silver color. **(Cat. #D226) \$5.95**

SKIN-BLOK™ WIDE

Adhesive, Transparent Microwave Shielding

Skin-Blok is a super thin shielding film that is semi-transparent. Incorporates a high performance shielding mesh material providing 40+ dB of attenuation with the simplicity of a peel and stick film. Very conductive on adhesive side. Just trim to size for a custom fit, peel off the backing and stick it in place. Woven 132/inch mesh polyester fibers coated with blackened Copper for

excellent corrosion resistance. Very easy to handle. Great for windows or any application where you want to see through the shield.

Cover your alarm clock, windows, microwave oven door, or other wireless devices. 11 inches wide. Sold by the linear foot. Specify length. (Note: Moiré patterns may occur with some applications due to mesh size)

Skin-Blok Wide (Cat. #D245) \$24.95 per lin ft
