

CELL PHONE SHIELDS

BOOM HEADSET

Over the Head Headset for Easy Hands-Free Conversation

Ideal for hands-free communication. Dramatically reduces microwave exposure by keeping the phone away from your head! Comfort-fit adjustable headband design. Reversible to use with either ear. Also features an adjustable boom microphone for optimum voice output, standard jack for use with office, home, cellular or wireless phones, and a four-foot cord. Can also be used with your tape or CD player etc. Very comfortable, especially for long term wear. Better hold. Quicker to put on than ear bud style headsets. 90 Day mfr's warranty from Panasonic. Add a ferrite bead for added protection.

- Boom Headset (2 band, 2.5mm) (Cat. #R726-2.5) \$9.95**
- Boom Headset (3 band, 3.5mm) (Cat. #R726-3.5) \$9.95**

Stereo Hands Free Headset with Microphone

Conquer Many Tasks While Talking On Your Phone!

Do you like to hear your phone calls in both ears? Stereo Hands-Free Headset with a gold plated **3.5mm, 3 band plug**. Sporty lightweight design, this headset provides clear stereo sound quality comfortably to your ears. The convenient microphone allows you to make and receive calls at the touch of a button. Compatible with all universal 3.5mm headphone jacks. Can be used with Ferrite to further reduce RF exposure.

- Stereo Headset with Microphone (Cat. #R727) \$14.95**

iPhone RETRO HANDSET

Comfortable, Traditional, Functional Safety

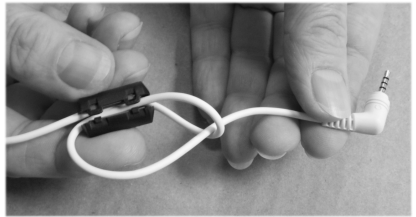

Tame the radiation! We know how much you love your iPhone. Now enjoy it without radiating your head. Stylish black handset plugs into iPhone 4, 4S, 5, 6 providing clear sound without bending your neck. Allows you to keep the phone at a distance from your body, reducing radiation by 95% or more. Less echo than some hands free sets, it also offers an answer key and volume control. 3.5mm plug. 4-foot coiled cord. Great for home, office, or travel. Makes a great gift too! **iPhone Retro Handset (Cat. #R348) \$19.95**

FERRITE SNAP BEAD

Reduce RF Noise in Wiring

Cables can act as an antenna, especially if they pass close to a strong source of RF radiation. One study has suggested that if the cable of a hands free mic passes near the phone's antenna, it can pick up some radiation and transmit it to your ear. Our ferrite snap bead is designed to reduce RF radiation in the cable.

Made in 2 halves, you simply press it around the hands free wire at any convenient location near the earpiece end. Couldn't be simpler. It is small and lightweight enough to be almost unnoticeable, yet powerful enough (50 ohm impedance minimum) to control nasty radiation. These are brand new, top quality and will accommodate wires up to 5 mm (³/₁₆ inch) in diameter. About 1 inch long. If you are concerned about radiation from your conventional hands free ear mic, this is the answer. Useful from 200-1000 MHz.

- Ferrite Snap Bead (Cat. #R238) \$4.95**
