

LOW EMF DEVICES

RadiaFence™

Create A Radiation Shadow Where You Need It

So what do you do when you need a wireless radiation emitting device but you want to limit the exposure to the people? Perhaps you use a **wireless baby monitor**, have a **cordless phone base station**, or you sleep with your **cell phone** on your nightstand. Maybe there is a **wifi router** right next to you at work or school. RadiaFence is the answer.

It's a free-standing, semi-transparent microwave barrier that you can put almost anywhere you need. It blocks most of the radiation emitted in one direction by "casting a shadow" (typically 70-90% reduction), while still allowing the wireless device to work. Like sitting in the shade on a sunny day. Portable, inexpensive, attractive. And it couldn't be easier to use. If you like, you can add a decorative photo or warning sign to change the appearance. Available in 5 styles. Pick the sizes which meet your needs.

RadiaFence™

Small (Cat. #R754-S) \$12.95 (5 x7)

(for cellphones, baby monitors, smaller items)

Vertical (Cat. # R754-V) \$13.95 (8W x10H)

Horizontal (Cat. # Q 754-H) ... \$13.95 (10W x 8H)

(for cordless phones, smaller wifi, laptops)

Jumbo (Cat. # R754-J) \$34.95 (11W x17H)

(for larger items: microwave ovens, larger wifi, etc)

Angle (Cat. # R754-A) \$15.95 (10W x 7H)

(ideal when you want some wrap around)

Box

WaveCage™

Softens The Impact of Wireless Radiation

Most wireless devices are overpowered so that their signal reaches way farther than necessary. And there are times when you want to reduce the strength of

this wireless radiation, but not completely kill the signal. WaveCage does exactly that. Designed to be "leaky", it permits only a fraction of the RF radiation to penetrate. Exposure to people is reduced (typically 90-99% reduction), and the device usually still works, but with a more limited range.

Great for when you permanently or temporarily want to quiet

microwave levels without fully turning off the source. Place it over cellphones, cordless phones, two-way radios, smart devices, even wifi routers. Sturdy metal. The two larger units have convenient handle and access holes for wire and cable pass through. Pick the sizes which meet your needs.
